

Will AI replace university lecturers?

- context: Over the past few decades, we've seen AI taking over more and more jobs/tasks

main topic: AI could replace human teachers in universities in the future

problem: - We may wonder what place AI will take in society.

- How would AI make its way into the educational field?
- What is the future of teaching?

- the project:
 - virtual classrooms
 - online classes
 - personalized teaching
 - personalized schedule
- robots don't need to sleep/never get tired
- 1 robot = cheaper than 100 professors
- quick response to students
- ethical issues
 - student's mental health (health)
 - still in development

- - the social aspect of remote learning = isolat°
- be cut off from the rest of the world
- very impersonal
- dehumanization
- maybe the future of education? ref. to Covid19 crisis
- AI:
 - in medicine:
 - computer scans or X-rays
 - robots performing surgery
 - computers dealing with customer's order (drive in)
 - driverless cars / self-driving cars
